Each lifepo₄ cell will safely range between 2.5V and 3.65V. For a "12V" battery that means the pack will be 10V-14.6V. Lifepo₄ doesn't lose voltage linearly though, so the majority of its time (~80%) will be spent between 3.2V and 3.3V. therefore the nominal voltage of Lifepo₄ is considered 3.2V.

A Lithium-Ion battery does not need to be fully charged. Service life even slightly improves in case of partial charge instead of a full charge. This is a major advantage of Li-ion compared to lead-acid. The SuperPack batteries will cut-off the charge or discharge current when the maximum ratings are exceeded.
