

What is Austria's energy policy?

Austria's energy policy rests on three pillars: security of supply, energy efficiency and renewables. The country's efforts to decarbonise the economy have progressed as renewable energy use has continued to grow, while use of fossil fuels has decreased.

What is energy in Austria?

Energy in Austria describes energy and electricity production, consumption and import in Austria. Austria is very reliant on hydro as an energy source, supported by imported oil and natural gas supplies. It is planned by 2030 to become 100% electricity supplied by renewable sources, primarily hydro, wind and solar. [citation needed]

How can Austria achieve a 100% renewable electricity supply?

Austria has a target of a 100% renewable electricity supply (national balance) by 2030. To successfully deliver this target, Austria needs to achieve a net increase of around 22-27 terawatt hours (TWh) of renewable electricity across all technologies. Austria is already a global leader in renewable energy.

What is Austria's energy industry?

Get a brief overview of Austria's energy industry with these facts and figures. In 2023, hydropower accounted for up to 67% of the electricity generated in Austria. In 2023, renewable energy made up 87% of Austria's total electricity generation.
