

Can a storage battery work without solar panels?

Yes, a storage battery can absolutely work without solar panels, which means you can still enjoy all the benefits of solar power. Additionally, a storage battery can store electricity from the grid, which is a great way to save money if you're on a time-of-use tariff.

Is a storage battery a good idea?

A storage battery is a great way to become more energy-independent, even without a solar panel system to charge it. Battery storage alone offers some great benefits, including reducing the cost of electricity from the grid and increasing your personal energy independence.

Should you combine battery storage with solar panels?

We recommend combining battery storage with solar panels for this very reason. Getting solar panels means you can charge your battery for free whenever the sun is up. You can then rely on your battery when your solar panels can't generate enough electricity, such as on seriously cloudy days or at night.

How long does a solar battery last?

Since the batteries store electricity off-peak, you'll effectively slash your electricity bills in half by installing them. This should enable you to break even in around 9 years. They are very flexible, and you can install them on their own or after you've installed solar panels.

How long does a storage battery last?

A storage battery's typical lifespan is also 10-15 years. With solar panels lasting 25 years or more, you'll need to purchase a second battery, which brings the total cost to around \$16,000. While you can charge your storage battery using grid electricity, it's best to do so when electricity prices are lower.

What size solar battery do I Need?

If you're wondering what size battery you need, an average three-bedroom home in the UK will need an 8 kWh storage battery. One or two-bedroom properties will be fine with a 2-5 kWh battery, and a four or five-bedroom home should consider anywhere between 9 and 13 kWh of battery capacity. Which solar products are you interested in?

If solar panels aren't viable for your home or you just aren't quite ready to get started with solar panels, it's still possible to gain some energy independence with battery storage. Standalone batteries are a type of energy storage system that will recharge from the grid to be used during an outage or peak demand times.

Home battery storage systems can exist independently, without the presence of solar panels, providing a viable option for homeowners who may not have access to solar energy generation or have other specific energy needs.
