

I guess the best check is the panels themselves. The monitoring software shows us how much each panel is generating, so we can see if any of them have a problem. And we can see the total amount each hour / day / week / month / year so we can see that the maximum on sunny days is close to the theoretical 4kW, and we can see whether the system's ...

For the equipment and solar panel installation, the lowest per-watt cost you'll see for a tier-one solar panel will be in the low \$2.00 range, usually between \$2.20 and \$2.40. That means the typical 9 kilowatt (kW) photovoltaic (PV) system would total between \$19,800 and \$21,600 before the federal solar tax credit (ITC) and other incentives.

The Chinese government influenced the global solar market by investing low-cost financing into the sector. This made the solar costs drop significantly in the past few years and boosted solar panels' manufacture by more than ten-fold. While it's possible to buy a solar panel for as low as \$100, no solar panel operates in isolation.

From backup power to bill savings, home energy storage can deliver various benefits for homeowners with and without solar systems. And while new battery brands and models are hitting the market at a furious pace, ...
