The first Australian solar farm in Antarctica will be switched on at Casey research station today. Australian Antarctic Division Director, Mr Kim Ellis, said the system of 105 solar panels, mounted on the northern wall of the "green store", will provide 30 kilowatts of renewable energy into the power grid -- about 10 per cent of the station's total demand over a ...

First Aid.

That is the definition of the polar circles: at 66°N and 66°S the sun doesn't dip below the horizon for one night. With every degree latitude closer to 90°; this increases up to 6 months at the pole proper. Already at 60°; where the sun does set 365 times a year, it can still be light enough to read a book outdoors at midnight.

SUNTUF are virtually unbreakable polycarbonate sheets, easy to cut & install with basic tools & are backed by a limited lifetime warranty. Enjoy your outdoor spaces, rain or shine, by installing the industry-leading plastic roofing solution for home improvement projects. Whether you're covering your patio, pergola, or deck, completing a storage shed, or building your own carport, ...

Due to Antarctica's high latitude, sunlight intensity can be lower compared to other regions. To maximise energy production, solar panels can be equipped with tracking systems that adjust their orientation to capture the ...

The rule of thumb for fixed angle is your latitude = your best angle for year-round. Due to declination during the summer the sun will be best at your latitude -23.45 degrees (summer solstice best). So around 20 degrees declination to catch the best sunshine may-august if you are in the northern part of the states.

Antarctica is a soft white texture, with large stark white particles DuPont(TM) Corian®; is one of the most versatile and respected solid surface material Extremely easy to clean and nonporous (stains cannot penetrate material surface)

The first is the availability of sunlight. Although during summer Antarctica can see 24 hours of sunlight (great

for solar power generation), during winter several months can pass without sun, making solar practically useless. ...

The dome structure includes more than 900 thin panels made of aluminum alloys for maximum low temperature strength and minimum weight. No shipped component of the dome weighed more than 50 pounds. All pieces for the dome could fit within an LC-130, and it took only three flights to transport the entire structure to the South Pole.

The first is the availability of sunlight. Although during summer Antarctica can see 24 hours of sunlight (great for solar power generation), during winter several months can pass without sun, making solar practically useless. Secondly, solar panels have to be mounted high off the ground to help limit snow cover reducing their efficiency.

Here at Swoop Antarctica, our team of experts have a passion for exploring the White Continent and are dedicated to finding you the best trip for your wants and needs. We hope this tour of the best places to visit in Antarctica has you wanting to start planning your trip of a lifetime - if it has, you can get in touch with our team today. *
