serialize two panels for 80v, reduce solar charging to the large packs by 500w. (Reconfigure the final panel to directly charge my 12v systems) Charge a small 24v pack, use DC-DC chargers to supply my 48v and 12v packs. I can definitely add more context but then the question will get lost in the weeds. T.

If you had 12 volt solar panels and your amps are 14, you would need a charge controller that had at least 14 amps. However due to environmental factors, you need to factor in an additional 25%. This brings the minimum amps that this charger controller must have to 17.5 amps. In this example, you would need a 12 volt, 20 amp charge controller.

The panels themselves don't run at 12v either, there are 2 voltages on any given panel, the VoC and the Vmp. The Voc on a 12v panel is usually around 20-22v and that's what you'd see if you just stuck a meter in the wires on a sunny day. Vmp is where the voltage drops to once it actually has to start putting out amps and doing real work.

3. RICH SOLAR 200 Watt 24 Volt 9BB Cell Solar Panels. The RICH SOLAR 200 Watt 24 Volt 9BB Cell Solar Panel is a high-performance option for those looking to improve their solar system's efficiency. This panel has several features that make it stand out from other solar panels on the market. **BENEFITED FEATURES:**

Plenty of small photovoltaic solar cells that convert sunlight into electricity are linked together to form a solar panel. 12V panels contain 36 cells, while 24V ones have 72. Those photovoltaic cells absorb tiny particles of light from the sun - called photons - when sunlight comes in contact with the solar panel and turns them into direct ...
