Should you install a solar thermal system for heating hot water?

Installing a solar thermal system for heating hot water is a good move for the environment. But before you go ahead, it's essential to know all the facts so you can decide if a solar hot water system is the right choice. First, it's important to point out that there are two types of solar panel systems:

Do you need a solar inverter for water heating?

These systems have a solar panel inverter that converts Direct Current (DC) from the solar panels into Alternating Current (AC) that can be used in your home or business. Solar thermal panels, meanwhile, generate heating and hot water from energy from the sun. These are the panels you'll need for solar water heating.

Can a solar PV system benefit from free hot water?

Many UK homeowners have Solar PV installed to benefit from greener electricity. But what if I was to tell you that you could also use your Solar PV to benefit from free hot water. Most homeowners won't use all of the Solar energy that their Solar PV system generates, leaving a surplus amount being exported back to the Grid.

Does a solar water heating system need a boiler or immersion heater?

As the amount of solar energy available varies throughout the year, a solar water heating system won't provide all the hot water needed. Solar thermal panels can produce around 80-90% of hot water in summer and 20-30% in winter - that's an average of up to 70% over a year. So, a boiler or immersion heater is needed to make up the difference.

Are solar hot water cylinders compatible with conventional boilers?

Conventional boilers and hot water cylinder systems are often compatible with solar water heating. However, if you have a , this will mean a solar hot water cylinder must be added to the system, so you'll need to consider where this might be located.

Does solar water heating have a warranty?

Most solar water heating systems come with a five to 10-year warranty. Lowers your carbon footprint. You'll still need a boiler or immersion heater to make the water hotter, or provide hot water when solar energy isn't available. Not all boilers are compatible with solar water heating.
