

Can soft film rolls generate electricity from solar energy

Could power roll be the future of solar energy?

In the future, the design could also bring the potential for solar generation and energy storage within a single lightweight device. In Power Roll's thin-film architecture, each of the tiny microgrooves embossed onto the substrate forms an individual solar cell, so the device can carry on working, even if a hole is punched in it.

Can thin-film perovskite be used to generate cheap solar power?

Innovations promise additional cost savings as new materials, like thin-film perovskite, reduce the need for silicon panels and purpose-built solar farms. 'We can envisage perovskite coatings being applied to broader types of surface to generate cheap solar power, such as the roof of cars and buildings and even the backs of mobile phones.

Could silicon solar cells be a lightweight power source for uncrewed aerial vehicles?

Highly efficient silicon solar cells that are as flexible as a sheet of paper could offer a lightweight power source for applications such as uncrewed aerial vehicles while cutting the cost of solar panels on the ground (Nature 2024, DOI: 10.1038/s41586-023-06948-y).

Are thin-film solar cells more flexible?

Meanwhile, some thin-film solar cells --based on materials such as copper indium gallium selenide--are much more flexible because they contain light-absorbing layers just 1 um thick. That means they can wrap around the curves of vehicles or fit around parts of buildings that are out of bounds for stiff panels.

What is a patented solar film?

Our patented solar film combines thousands of mighty Microgrooves with Perovskites- an abundant mineral and the perfect partner for solar absorption. This unique combination means we can create lightweight, flexible solar modules that don't use rare earth materials and are produced using cost-efficient processes.

Can a new thin film make solar panels and capacitors?

Having picked up GBP 5.8 million (\$8 million) in a series of investments, U.K.-based Power Roll is pushing ahead with pilot production of an innovative new thin film with which it can manufacture both solar modules and capacitors.
