The differences between CIGS and crystalline solar cells. One big difference is that the CIGS is more light-sensitive and therefore will a 100 Watt peak CIGS panel produce around 10-15% more power in a year, than a 100 Watt peak crystalline panel. CIGS will start earlier in the morning and stay on for longer in the evening.

The 12V/24V in product titles (ex. 150W 12V CIGS Solar panel) does not refer to the actual voltage (V_{oc} or V_{mp}) of the solar panels, but rather to the voltage of the solar system or energy storage system to which the panel is best suited. The voltage of the solar panel must be higher than the solar system voltage.

Copper indium gallium selenide (CIGS) is a commercially available, thin-film photovoltaic (PV) technology (Kim et al., 2021), with efficiencies of 23.6 % at the cell and 19.2 % at the module level (NREL, 2024).As of 2023, the global installed capacity of CIGS PV has surpassed 12GW (Fraunhofer Institute of Solar Energy Systems, 2023).The active layer of ...
