

What is the energy condenser added by Projecte?

This page is about the Energy Condenser added by ProjectE. For other uses, see Energy Condenser. The Energy Condenser is a machine added by ProjectE, based off the Energy Condenser added by Equivalent Exchange 2. The Energy Condenser performs three functions.

How do you use the Energy Condenser?

To use the Energy Condenser, place one target item in the upper left hand corner of the Energy Condenser. If the Condenser is hooked up to Energy Collectors, it will automatically process the item and output the resulting energy.

What is the energy condenser Mk2?

The Energy Condenser MK2 is a machine added by ProjectE. The Energy Condenser MK2 is an upgraded version of the Energy Condenser. In addition to being substantially faster than the Energy Condenser, the MK2 also has a separate inventory for output. This separate inventory lets hoppers put items into the Condenser.

[PO3 Titan] What to do when we finally got energy condensers MK2 in Projecte, what would be the best step going in the direction of the transmutation table and tablet. ... but no automation on AE2 cause it kills the TPS and kick us out of the server as soon as we have a decent setup running with just standard basic automation (200-300 recipes ...

The Energy condenser takes all emc-able items and converts them into a target item. The idea being that you can turn all those bones and zombie flesh into nether stars or some other high value item, that you can then grab that high value stack, and drop into your tablet by hand.

From what little I understand about power flowers though, they use EMC that they generate from light sources like glowstone blocks to make whatever item you pick in the energy condenser thing in the middle, but you still have to take those items and enter them manually into a ...

You can get an energy condenser and repair talisman before the chaos dragon and stuff like the transmutation table is gated behind chaos shards from the chaos dragon, meaning you only those things when you're almost done with the pack and just want to do a few remaining quests here and there. ... I think ProjectE is inherently flawed as a ...

The Energy Condenser is a very useful object added by the Equivalent Exchange mod. It behaves in a way similar to the Transmutation Tablet, but is able to be made automatic. You put one target item in the spot on the upper left hand corner, and if the Condenser is hooked up to Energy ...

Cartes fleurs A Power Flower is an arrangement of Energy Collectors (of any size) and Antimatter Relays (of

any model) that feed into a central Energy Condenser, producing an unlimited amount of EMC to convert into materials. The arrangement of the collectors and relays takes on the shape of a flower, hence the term "Power Flower". On an SMP server, leaving this Power Flower ...

Alright, definitely good to know. From what little I understand about power flowers though, they use EMC that they generate from light sources like glowstone blocks to make whatever item you pick in the energy condenser thing in the middle, but you still have to take those items and enter them manually into a transmutation table to increase the main EMC pool that is used for ...

[ProjectE] What's a relatively cheap but still decent farm to do for ProjectE for the Energy Condenser? I have 2 Mk2 and 1 Mk3 Energy Collector and it's extremely slow for my likings yeah, so what I'd like to ask is if there's any farm that would speed up this process by a lot.

[ATM7 To the sky] Is it worth it to make an energy collector setup with an energy condenser from ProjectE? Title. I've seen people only use the condensers so far, but I would like to know if it would be worth to set up an energy collector for some emc, despite there not being a lot of items that are emc-able in this pack.

Energy Collector MK1 is a tier 1 passive EMC generator added by ProjectE, based off the Energy Collector added by Equivalent Exchange 2. It passively generates 4 EMC every 1 second up to a maximum of 10,000 EMC depending on the highest light level. When placed adjacent to an Energy Condenser MK1, Energy Condenser MK2, Anti-Matter Relay MK1, Anti-Matter Relay ...

But with an energy condenser, you can left click any item into the slot and make copies of it given you have enough EMC supplied to the chest. You may also want to make a transmutation table and tablet which are quite expensive recipes, but once you do make them, you can click things into the table/tablet to learn them (if they have EMC value ...

The best in projectE alone is just collectors with relays around an energy condenser with many watch of flowing time around. If you also have Project EX stuff is different as you can import items directly into EMC

The Energy Condenser MK2 is a machine added by ProjectE. The Energy Condenser MK2 is an upgraded version of the Energy Condenser. In addition to being substantially faster than the Energy Condenser, the MK2 also has a separate inventory for output. This separate inventory ...

Using the following pattern, 17 Energy Collectors can be linked via 5 Anti-Matter Relays to a single Energy Condenser. Any combination of machine tiers can be used but be sure to upgrade your Anti-Matter Relays to ensure you have enough capacity to handle the EMC energy flow.

Power flowers generate emc from effectively nothing. The item you're condensing EMC into is entirely up to you. Diamond blocks, emerald blocks and stuff like that are just convenient because they're really dense in terms of EMC, so you don't have to move as many items from the condenser to the table.

????? (Energy Condenser)??????,??????[PE]??????  
(ProjectE),???MOD??,??Minecraft(???)MOD(??)????????????MOD???
