

Why should you choose DNV for your wind farm project?

With DNV, your wind farm project is in the safest hands possible. Recognized as the world's leading technical authority in wind power generation for three decades, all the expertise and know-how of our global team of experts is at your disposal. With DNV, your wind farm project is in the safest hands possible.

How many turbines are in a Siemens Wind Farm?

The first phase consisted of 175 Siemens Wind Power SWT-3.6 turbines and two offshore substations, giving a wind farm with a peak rated power of 630 MW. Each turbine and offshore substation is erected on a monopile foundation, and connected together by 210 km (130 mi) of 33 kV array cables.

What is the largest offshore wind farm in the world?

It was the largest offshore wind farm in the world until Walney Extension reached full production in September 2018. Construction of phase 1 of the wind farm began in March 2011 and was completed by mid 2013, being formally inaugurated by the Prime Minister, David Cameron on 4 July 2013.

How does a wind farm work?

Power from the wind farm is exported by four undersea high voltage cables that pass under the sea wall and continue a further kilometer inland to the substation. It is here the power is fed into the National Grid transmission network. The electricity is brought ashore at 150kV.

Why do you need a wind farm project certification?

Project certification helps you to achieve stable operation and proper risk management. In a competitive energy sector, the ability to consistently produce sustainable power is essential. This requires reliable quality, stable operation and proper risk management at all times. DNV's wind farm project certification helps you achieve exactly this.

When was the first phase of a wind farm built?

Construction of phase 1 of the wind farm began in March 2011 and was completed by mid 2013, being formally inaugurated by the Prime Minister, David Cameron on 4 July 2013. The second phase of the project was refused planning consent in 2014 due to concerns over the impact on sea birds.

The London Array is a 175-turbine 630 MW Round 2 offshore wind farm located 20 kilometres (12 mi) off the Kent coast in the outer Thames Estuary in the United Kingdom. It was the largest offshore wind farm in the world until Walney Extension reached full production in September 2018. Construction of phase 1 of the wind farm began in March 2011 and was comp...

Wind turbine analysis using two years of wind speed data shows that the application of direct wind-to-EV is able to provide sufficient constant power to supply the large-scale charging stations.
