landscape, identify potential applications in the electric energy storage sector, and compare various alternative energy storage technologies by application. The Current Landscape There are a variety of potential energy storage options for the electric sector, each with unique operational, performance, and cycling and durability characteristics.

The Electric Power Corporation (EPC), as the sole provider of electricity in Samoa, currently utilizes electricity generated from the renewable assets including those produced by Independent Power Producers (IPP). The Samoa Energy Database has recorded up to 22 community -based biogas systems installed from 2010 to 2022.

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...
