

During my INSEAD summer break, I had the privilege of joining the team at Elyos Energy, a sustainability-focused energy management and optimisation start-up founded by two INSEAD alumni.. Based in London, the team at Elyos are building an energy management software designed to decarbonise commercial real estate properties by using energy usage data to ...

Elyos is reinventing the way commercial buildings manage energy. Our SaaS platform connects smart thermostats, HVAC systems, solar and batteries in large commercial buildings to optimise real-time, shift usage outside of peak energy prices and opt-in to national grid demand response events where customers can earn money for energy reduction.

When was the last funding round for Elyos Energy? Elyos Energy closed its last funding round on Oct 13, 2023 from a Seed round. Who are Elyos Energy 's competitors? Alternatives and possible competitors to Elyos Energy may include Amperecloud, Singularity ...

A significant increase in offshore wind capacity helps to address the question of how we'll generate energy in a net zero Britain, but it doesn't answer the question of what upgrades the grid needs to deliver this massive increase in volatile wind energy to households across the UK.

Energy flexibility plays a crucial role in the UK's electricity market, especially as the grid becomes more and more driven by renewable energy. Energy flexibility is a rapidly growing space that enables this electrification by balancing electricity demand and supply.

Elyos launches European energy market access with its first end-to-end customer going live across the borders in Amsterdam, the Netherlands. After a huge effort from our engineering teams, our platform now covers multiple currencies, multiple markets and multiple locations.

Elyos Energy is helping to build a new, resilient energy system by launching energy flexibility and demand response for mass markets. The national grid spends \$4bn each year on demand response; leveraging gas peakers to manage surges of demand, in an attempt to reduce the risk of blackouts during periods of peak electricity usage. ...

We connect to smart thermostats, EVs, HVAC systems, solar, and batteries in large commercial properties to optimise consumption and automate participation in demand response energy markets. Our platform allows customers to ...

In October 2023, Ofgem gave the go ahead to allow independent aggregators to trade their flexibility in the wholesale market. This approval is facilitated by a change to the Balancing and Settlement Code (BSC) called P415 "Facilitating access to wholesale markets for flexibility dispatched by Virtual Lead Parties (VLPs)". The change will take effect from 7 November 2024.
