

How is Jamaica's energy future being secured?

Jamaica's energy future is being secured through Goal 7: Jamaica's industry structures embracing eco-efficiency for advancing international competitiveness, and moving towards building a green economy.

What is the primary source of energy in Jamaica?

The primary source of energy in Jamaica is imported oil. The Jamaican economy is characterized by high energy intensity and low efficiency and is almost completely dependent on it. Petroleum consumption is concentrated in three areas, namely: bauxite/alumina, power generation and transport.

Why is energy diversification necessary in Jamaica?

To provide high-quality, affordable, environmentally-friendly energy and reduce the country's dependence on high-cost imported oil, a comprehensive program of efficiency improvement and energy diversification is required for Jamaica.

Why is electricity important in Jamaica?

Electricity is vital to the stability of Jamaican society and plays a critical role in the viability and modernization of the Jamaican economy. It is often considered as the main life blood for development and the improvement in the standard of living of the people in Jamaica.

Production. In 2020, Jamaica generated 4767 GWh of electricity; fossil fuels were the main energy source (88.67%), supplemented by smaller contributions from wind (5.87%), hydro (2.85%), and solar power (2.60%). More than a quarter (26.5%) of Jamaica's electrical output is lost through poor transmission and distribution infrastructure.

As the global shift toward renewable energy accelerates, Jamaica faces a critical decision about its energy future. Kenton Palmer's insightful article, supported by Allan Searchwell's comments, highlights a ...
