

Why is Syria's energy sector in turmoil?

Syria's energy sector is in turmoil because of the ongoing civil conflict that began in the spring of 2011, with oil and natural gas production declining dramatically since then. Syria's energy sector has encountered a number of challenges as a result of conflict and subsequent sanctions imposed by the United States and the European Union.

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

Does Syria have electricity?

Syria also had separate entities for the generation and distribution of electricity. Syria's oil sector has been in a state of disarray since 2011. Production and exports of crude oil have fallen to nearly zero, and the country is facing supply shortages of refined products.

Can Syria resurrect its oil and gas production?

Resurrecting oil and gas production will not be easy. Before the war, Syria produced 383,000 barrels a day. Now, it produces less than 90,000, according to the World Bank. Facilities and pipelines, including those that deliver energy to Iraq, Jordan and Egypt, have been destroyed or damaged. The country has been importing more oil than it exports.

What happened to Syria's oil & natural gas industry?

Syria, previously the eastern Mediterranean's leading oil and natural gas producer, has seen its production fall to a fraction of pre-conflict levels. Syria is no longer able to export oil, and as a result, government revenues from the energy sector have fallen significantly.

What happened to Syria's electricity generating capacity in 2012?

Syria's electricity generating capacity was 8.9 gigawatts in 2012, although damage to electricity generating facilities, high voltage power lines, and other infrastructure has likely reduced the country's effective capacity. Electricity distribution losses, already 17% of total generation in 2012, have likely climbed even further.

Syria: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key ...

The use of solar energy spreads from northwestern Syria, which started relying on solar power around 2016, passing through areas in the north-east, ending with the areas under the control of the Syrian regime, which

directed a clear trend to generate electricity through them, not only in large industrial facilities but even in homes.

The proposed Qatar-Turkey pipeline aimed to transport natural gas from Qatar's North Dome field through Saudi Arabia, Jordan, and Syria to Turkey, facilitating European access to non-Russian gas supplies. In 2009, Syrian President Bashar al-Assad declined to sign the agreement, reportedly to safeguard Russia's interests as Europe's primary gas supplier.
