A backup power system needs to be connected to the circuit breaker panel and certified to UL1741. Otherwise it could backfeed into the grid without a lockable shut-down switch. Any battery plugged into a standard outlet in your business is required, by law, to stay shut-down during a power outage.

Comparatively, partial-home battery backup systems usually store around 10 to 15 kWh. Given that power outages are infrequent in most parts of the country, a partial-home battery backup system is generally all you'll need. But, if your utility isn't always reliable for power, whole-home battery backup may be the way to go.

A whole home energy system with battery backup is a smart choice that can store and manage energy to provide backup power for the needs of the entire house. Such a whole home energy solution integrates solar production systems and battery backup, storing excess solar energy to use during the night or power outages.

A home water backup system ensures that your household has a reliable supply of clean water even during disruptions, such as municipal water shortages, outages, or natural disasters. These systems not only store water but also filter and purify it, so you always have safe, high-quality water available for drinking, cooking, cleaning, and other ...
