Do solar panels and skylights work together?

Having a solar panel is good for the environment and their wallet. Unfortunately, their skylights occupy the prime space where the technology can collect the ideal energy amount. However, in our experience, we've seen how solar panels and skylights can effectively work together because they're a problem and solution in a single package.

Do skylights shade solar panels?

Skylights can come in a variety of shapes and sizes, as well as orientations and placement within a roof. The good news is that skylights present very little shade risk, as they are often inset within a roof. But even if they are not completely flush with the roof, skylights typically do not shade solar panels.

Can solar panels be installed over vents?

For vents that serve as exhaust for dryers, bathrooms, and attics, solar panels cannot be installed over them. These vents must remain unobstructed by solar panels, which can complicate solar panel installation. Thankfully, as explained above, solar panels are modular and can be placed in multiple locations and orientations on a roof.
