Can solar energy be turned into electricity without a generator?

Wherever your energy comes from, it'll almost certainly be turned into electricity with the help of a generator. Only solar cells and fuel cells make electricity without using generators. Photo: A typical electricity generator. This one can make up to 225kW of electric power and is used for testing prototype wind turbines.

Can you make a homemade generator?

Save on your electricity bills or get a free energy source when you are in a remote area. By using solar, wind power, hydro and mechanical power you can make your own homemade generator to run small appliances and power tools. From our list of diy generators you can select any one that you find easy and comfortable to build to suit your needs.

What makes electric power possible?

What makes electric power possible--and indeed practical--is a superb electromagnetic device called an electricity generator: a kind of electric motor working in reverse that converts ordinary energy into electricity. Let's take a closer look at generators and find out how they work!

Can a DC motor be a generator?

Or is there a specific type of motor (of which I do not know the name) that can work in both directions (battery to power the shaft OR torque-on-shaft to create a voltage difference between the terminals). Any DC motor with permanent magnets can easily be a generator.

How do electric generators work?

Electric generators are devices that use alternating magnetic fields to create a current through a wire circuit. While full scale models can be complex and expensive to build, you can create a simple electric generator easily. All you need...

How to run a generator without fuel?

Run this generator without fuel, sun, winds etc. by doing some cycling as well as getting a healthy exercise at the same time. With a multi meter check the voltage coming out of your motor and connect the positive output of motor to the positive input of charger and vice versa with the ground wire. Use 18 Amp-h battery and connect the terminals.
