

# Installation of solar panels in ridge houses

Can solar panels be installed on a roof or wall?

The installation of solar panels on a roof or wall of a private house is considered to be permitted development (i.e. doesn't require planning permission) provided that: Panels should not be installed above the ridgeline and should project no more than 200mm from the roof or wall surface on pitched roofs.

Can solar panels be installed in conservation areas?

For solar panel installations in conservation areas to fall under permitted development, the conditions relating to the roofline and projection limits must be met. Panels should not extend above the roof's slope or ridgeline and should project no more than 200mm from the roof or wall surface.

Can a roof panel be installed above a ridgeline?

Panels should not be installed above the ridgeline and should project no more than 200mm from the roof or wall surface on pitched roofs. Note: these conditions will be satisfied if panels are mounted parallel to the roof on a sloping roof.

Can solar panels be installed on a roof that faces north?

Solar PV panels are not recommended for a roof that faces north. You also need to consider both the age of your roof and how strong it is, as PV panels are heavy. Shade could be a big problem for solar panels, so no panels should be installed where there is shade from trees, chimneys, walls or other obstructions.

Are solar panels worth it if you have a south-facing roof?

Solar PV panels are worth considering if you have a mainly south-facing roof with little or no shade and you're not thinking of moving home in the near future. How much energy you could produce with solar panels - and therefore how much money you could make or save - will depend on:

Can you install solar panels on a flat roof?

The DNO is the company responsible for bringing electricity to your home. Usually, your installer will register the device for you. Yes, it's okay to install panels on flat roofs. Solar panels work best when angled towards the sun, so panels on flat roofs are normally tilted up to help maximise energy production.
