What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

How does a photovoltaic system work?

A photovoltaic (PV) system is able to supply electric energy to a given load by directly converting solar energy through the photovoltaic effect. The system structure is very flexible. PV modules are the main building blocks; these can be arranged into arrays to increase electric energy production.

What are grid-connected and off-grid PV systems?

Learn about grid-connected and off-grid PV system configurations and the basic components involved in each kind. Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system.

What are the components of a solar PV system?

The basic components of these two configurations of PV systems include solar panels, combiner boxes, inverters, optimizers, and disconnects. Grid-connected PV systems also may include meters, batteries, charge controllers, and battery disconnects. There are several advantages and disadvantages to solar PV power generation (see Table 1).

What is a storage battery in a PV system?

In a PV system the energy produced by PV modules does not always coincide with energy demanded. A PV array that is not grid-connected needs to store the energy excess produced by solar cells. Electrical storage batteries are often employed in Stand Alone PV systems. The primary functions of a storage battery in a PV system are :

What is a solar PV module?

Solar modules, though similar in design (silicon crystalline-type) will vary by size and power produced. Readers are encouraged to refer to the Extension factsheet, "Demystifying the Solar Module" (AZ1701) for information about solar PV modules. Simple systems have fewer components, but are limited to providing energy when the sun is shining.
