

# Is it good to use photovoltaic panels as the roof of a villa

Can solar panels be used as a roof?

We all have that image of solar panels stuck up on a roof, as an addition to an existing roof. However, in new buildings, a lot of people ask themselves, can solar panels be used as a roof so I don't need to purchase two materials? Solar panels can be used as a roof, but the exact build up will depend on the specific product you choose.

Can solar panels be installed on a glass roof?

Glass roofs: As they are too fragile to support the solar panels and fixings. Nevertheless, if your roof isn't suitable for solar panels there are other options too. For example, you may be able to install ground-mounted solar panels to take advantage of any shade-free land you own.

Can you install solar panels on a roof in the UK?

The majority of UK homes have a roof suitable for solar panel installation. Great news for anyone looking to generate their own renewable electricity. If you'd like to speak to an MCS certified (or equivalent) solar installer for advice - you can get free no-obligation quotes from up to 4 solar installers in your area using Solar Guide.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m<sup>2</sup>, and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Can a flat roof hold solar panels?

This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels. Drilling into a flat roof can cause leaks, so an installer will usually ballast the panels instead - but these will add around 80kg per panel.

How long do solar panels last on a flat roof?

Most UK roofs are strong enough to hold solar panels for their entire lifespan - which can last 40 years or more. This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels.
