In ideal conditions, a 1kW system will generate around 4 units daily. Thus, a 500kW system in perfect situations can generate at least $500 \times 4 = 2000$ units in a day and 60000 units in a month. However, these are ideal figures. The actual generation can be much higher or much lower than these figures.

500 kW inverter maximizes system uptime and power production, even in the harshest environments. Commercial and Utility Scale The world"s largest solar power installations depend on Satcon PowerGate Plus PV inverters to provide effi cient and stable power--even in the harshest climates.
