So you're close, but not exactly right. Lithium iron phosphate batteries are a type of lithium ion battery. And it's not LiFePo4, it is LiFePO4. "Po" is polonium which would be really bad to be putting in rechargeable batteries. Lithium iron phosphate batteries, just like lithium cobalt batteries, don't need oxygen when they catch on fire.

A lithium-ion or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li + ions into electronically conducting solids to store energy. In comparison with other commercial rechargeable batteries, Li-ion batteries are characterized by higher specific energy, higher energy density, higher energy efficiency, a longer cycle life, and a longer ...
