

What is the cost of electricity in Liberia?

The tariff on generator usage in Liberia is estimated to be approximately US\$3.96/kWh, which is around 14 times higher than the LEC tariff, according to Options for Development of Liberia's Energy Sector. The document also mentions that the consumption of thermal energy in the form of charcoal and firewood costs Liberia about 960,000 trees per year.

How much solar energy potential does Liberia have?

Liberia has a high and consistent potential for solar energy, with an average level of 1,712 kWh/m²/year, which could generate 1,400 to 1,500 kWh/kWp. Some 43% of the land is covered with forests (41,790 square kilometers, World Bank 2015), but this does not affect the solar energy potential.

How many people in Liberia have access to electricity?

Fewer than 1% of rural Liberians have access to electricity. LIB Solar focuses on providing reliable, safe electricity to these communities by mobilizing communities instead of selling to individual customers. Each community receives high-quality solar systems that provide lighting and phone charging.

What is the cost of self-generation in Liberia?

The cost of self-generation in Liberia is estimated at not less than US \$0.75/kWh. Due largely to expensive diesel production, Liberia had one of the highest public tariffs in the world (in October 2012 \$0.52/kWh), but since the hydropower plant has been operational, the tariff has dropped (\$0.39/kWh to \$0.45/kWh in 2017).

What is the sustainable power source in Liberia?

In Liberia, sustainable power is harnessed from tight-knit communities to provide life-changing products and services, starting with access to solar electricity. Electricity creates opportunities -- opportunities to learn, communicate, start a business, and build a better life.
