

Can a solar PV system reduce dependence on diesel fuel?

This study found that eliminating dependence on diesel fuel would require 100-400 acres of available land, a requirement easily met at some but not all military installations. The size of the required solar PV can be reduced by deploying a hybrid system with a small amount of diesel generation.

Does solar & Antora energy outperform emergency diesel generators?

The NREL evaluation of solar plus Antora Energy storage system meets the U.S. Military's exacting standards, revealing that these systems significantly outperform emergency diesel generators in survivability probabilities.

How much electricity does a military installation use?

Typical mid-size to large active military installations' peak electric loads range from 10 to 90 MW, and their critical electric loads range from approximately 15% to 35% of the total electric load. Figure 6 illustrates conditions seen on seven different mid-size to large military installations. Figure 6.

What are the benefits of a multimegawatt solar PV system?

Economically replace a portion of natural gas used for thermal loads and further reduce an installation's CO<sub>2</sub> footprint. Accomplishing these benefits requires multimegawatt BESS with multiday durations coupled to utility-scale solar PV. An on-base utility-scale solar PV requires a large tract of available land.

Can a diesel power system meet DoD's electric energy resilience requirements?

Such a system can: Meet DoD's electric energy resilience requirements with a higher reliability than typically found in diesel-fueled systems. Provide resiliency without use of diesel fuel, thus eliminating the risk and vulnerability associated with the diesel fuel supply chain during a long-duration grid outage.

Can military forces reduce reliance on conventional fuel supplies?

The level of innovation displayed in alternative power generation and smarter energy solutions currently available or under development is good news for military forces looking to reduce their reliance on conventional fuel supplies.
