COMMERCIAL AND PUBLIC SECTOR: The commercial and public sector is the largest consumer of electricity among the four sectors. Consumption reached 2 816 kboe in 2014 (Figure 5).

How much electricity does Panama need?

At the same time, electricity demand in the country has continued to increase, reaching a peak demand of over 1 600 megawatts (MW) in 2015. To meet this growth, Panama introduced wind and solar photovoltaic (PV) energy in 2013, which reached 270 MW and 90 MW of installed capacity by 2016, respectively.

What are the main sources of electricity in Panama?

The largest source in the electricity mix is hydropower, followed by thermal generation (oil products and coal). Wind and solar power came on line in 2013, and by 2016 Panama had 270 MW of installed wind power capacity and 90 MW of installed solar power capacity (SNE, 2015).

How can Panama adapt its energy system?

To adapt Panama's energy system to this evolving paradigm, a comprehensive plan is needed that considers a rapid growth in demand from the electrification of transport, including from the introduction of expanded metro lines, electric passenger vehicles and electric buses.

How does Panama rely on fossil fuels?

Panama depends heavily on fossil fuels, which have historically accounted for roughly two-thirds of total primary energy supply. The country's transport sector has until recently relied almost entirely on oil and oil products.
