

Photovoltaic inverter technical parameter settings

What is the parameter name & configurable value for a PV inverter?

The parameter name and the configurable value depend on the PV inverter and the communication product in use. In battery-backup systems, you operate the PV inverters with the locally typical country data set for grid-tie PV systems in accordance with UL1741.

Can a PV inverter be set to stand-alone mode?

The PV inverter can be set to stand-alone mode and reduce its feed-in power if this is required by the battery state of charge or the energy demand of the connected loads. To do this, use the integrated frequency-shift power control (FSPC). Selecting the PV Inverter You can use the following PV inverters in off-grid systems.

Do I need a firmware update for my PV inverter?

The PV inverters must be equipped with at least the firmware version given in the table, or a higher version. If this is not the case, perform a firmware update (see PV inverter documentation). In off-grid systems, the nominal AC power of the PV system must not be more than double the nominal AC power of the Sunny Island inverters.

Why are inverter parameters important?

It is well-known that inverters are a crucial component of photovoltaic systems. Understanding inverter parameters is essential for better system design and equipment selection, ensuring the efficient operation and maintenance of solar power systems.

How do I configure a PV inverter without backup mode?

For PV inverters without backup mode, the country data set must be set to the locally typical value for grid-tie PV systems as per UL1741. The PV inverter is then configured for operation on the utility grid.

How do I change grid-relevant parameters in the PV inverter?

To change grid-relevant parameters in the PV inverter after the first ten operating hours, you will need a special access code, the SMA Grid Guard code. The application form for this personal access code is available in the download area at [in the 'Certificate' category of the respective PV inverter.](#)
