Are solar PV systems causing more electricity costs in the UK?

As more than 1.4 million solar PV systems have been installed in the UK this could mean a large amount of electricity is being, or has been, consumed for free - often unknowingly. This might potentially lead to increases in electricity costs if suppliers seek to make up for unplanned losses.

Can a solar meter show how much electricity I'm generating?

In future, these displays may also be able to show electricity you're generating yourself. Solar-panel owners should have a PV-generation meter that shows how much electricity their system is generating. If you're getting a smart meter installed, make sure that your supplier is aware you have solar panels.

Do I need a bidirectional or smart meter when installing solar panels?

Some regions mandate the installation of a bidirectional or smart meter when you install solar panels. Net Metering Policies: Many places have net metering policies that allow homeowners to receive credits for excess solar energy they contribute to the grid. For effective net metering, a bidirectional or smart meter is typically necessary.

Do solar panels need a meter?

In the context of solar panels, a bidirectional meter is often required to measure electricity flowing both from the grid to your home and from your solar panels back to the grid. Smart (Net) Meter: Modern homes may be equipped with smart meters, which are designed to measure electricity usage in both directions.

Can a smart meter work with solar panels?

Smart meters and solar panels can work together to help you reduce your energy bills, and keep track of the energy you're generating and using. In this blog post, we'll explain everything you need to know about using a smart meter with solar panels, and answer some of the most frequently asked questions. How do Smart Meters work?
