How do I install a solar hot water system?

(Learn more about the types of systems available here.) In most solar hot water installations, the first step is to put the solar collectors in place on your roof. Most solar hot water collectors are similar in shape to photovoltaic solar panels and will lie flat on your roof.

Do you need planning permission to install a solar hot water system?

For example, in the winter, the solar thermal system may only produce a fifth of the hot water needed. Some buildings may need planning permission to install solar thermal panels on the roof. Residences that have combi boilers will also need to install (and find the space for) a solar hot water cylinder.

Should you install a solar thermal system for heating hot water?

Installing a solar thermal system for heating hot water is a good move for the environment. But before you go ahead, it's essential to know all the facts so you can decide if a solar hot water system is the right choice. First, it's important to point out that there are two types of solar panel systems:

Which roof is best for a solar water heating system?

A south facing roof which is free of shading is ideal and your OFTEC registered solar thermal installer will offer advice on the most suitable position for your home. Is your existing system compatible with a solar water heating system?

Can a solar hot water collector be installed on a roof?

Most solar hot water collectors are similar in shape to photovoltaic solar panels and will lie flat on your roof. In order to properly mount the collectors, your installer may need to remove portions of your roof shingling and expose the flat tar paper that acts as protection between your shingles and roof deck.

Can solar thermal panels be installed on a rooftop?

In the summer months, the system can be relied on to provide all, or nearly all, of the hot water needed for a household. Solar thermal panels are also straightforward to install and require little maintenance. Solar thermal systems aren't just mounted on rooftops. They can also be installed on the ground or integrated into the built environment.
