

What are rivus batteries?

Rivus batteries are part of the solution to achieve a more flexible energy system with fewer emissions and a reliable supply of power. Low environmental footprint compared to metal-based batteries

What is rivus energy storage technology?

Rivus energy storage technology can optimise energy usage while minimising environmental harm. Battery storage systems are emerging as one of the key solutions to effectively integrate high shares of solar and wind renewables in power systems worldwide

Do rivus batteries require metals to be mined?

Rivus batteries, unlike other leading technologies on the market, require no metals to be mined. Lithium-ion and Vanadium redox flow batteries have a high environmental price as the extraction process is bad for the environment.

Why do we need rivus batteries?

Rivus' ambition is to keep our supply chain on a national level, our batteries can be produced in most countries lowering our environmental footprint. This means we have a more secure supply chain and our batteries are less vulnerable to resource scarcity.

What is rivus' vision for a greener future & revitalised World?

A global vision for a greener future and revitalised world: By 2050 the global energy sector will be mainly based on renewable energy. Rivus believes in this vision of a clean and green future. But it's not just an aspiration; Rivus is working to make it a reality. At the core of our work is our concern about the climate crisis.

How is Australian lithium battery waste disposed of?

Currently, the majority of Australian lithium battery waste is disposed of via landfill, which can contaminate the environment. Redox flow batteries are different from standard batteries such as lithium-ion as the energy is stored in liquids (electrolytes).

Non-metric multidimensional scaling of major benthic function groups and sampling locations among the four islands in the Pitcairn Group. A. macroalgae, B. corals, C. urchins.

Rivus is truly honored to win the E-Prize award in the Renewable Energy category! Electrification of high-temperature processes, metal-free batteries, and more efficient transport were the focus of this year's winners. Scalability stood out as a key theme for the jury, who had the tough job of selecting from nine worthy finalists.

In 2024, Rivus Batteries and Bengt Dahlgren will install Sweden's first organic flow battery in pilot-scale at HSB Living Lab in Gothenburg. This new battery technology is based on organic molecules instead of critical metals and can make a significant contribution to advancing energy storage which is more sustainable and cost-effective than today's battery ...

Rivus organiska flödesbatterier är starka, grönna och billiga. Konventionella flödesbatterier bygger på tungmetallen vanadin, som primärt utvinns i Ryssland, Kina och Sydafrika. Den processen är förmodligen inte miljövänlig. Rivus lösning kräver inga kritiska metaller, och tillverkas från tillgängliga organiska material.

Rivus Batteries is a Swedish cleantech start-up and a spin-off from the Chalmers University of Technology, developing organic electrolytes for flow batteries. Their mission is to help guide the development of renewable energy in the most environmentally friendly way possible. They will contribute to DCC with materials and knowledge of organic flow batteries and participate in the ...

Rivus Batteries | 2096 ljare; LinkedIn. Organic Flow Batteries. Low-cost. Safe. Metal-free. | Rivus Batteries offers truly green batteries for stationary energy storage applications through organic flow batteries. Rivus technology is already proven on a small scale, currently looking for pilot-customers interested in testing and pioneering sustainable stationary energy storage ...

Rivus is a start-up that is the industrial outlet of the aqueous organic flow battery technology developed at the Chalmers University of Technology in Sweden. Our mission is to help guide the renewable energy development in the most environmentally friendly way possible.

Under 2024 installerar Rivus Batteries och Bengt Dahlgren Sveriges första organiska flödesbatteri i pilotskala; HSB Living Lab i Göteborg. Den nya batteritekniken baseras på organiska molekyler istället för kritiska metaller. Konsultplatsen hitta enkelt; tt konsult inom installations- och energiteknik ...

Swedish startup Rivus Batteries secures EUR0.5M from Vista Science Ventures, NAVCAP AB, and EIT InnoEnergy to fast-track the deployment of its metal-free battery technology. The company aims to halve the cost and ...

Rivus believes in this vision of a clean and green future. But it's not just an aspiration; Rivus is working to make it a reality. At the core of our work is our concern about the climate crisis. We want to ensure that society gives its best ...

Rivus Batteries can help decrease sudden loads and reduce fuse contract costs. Reduced grid dependency. Keep your production operating at high availability, regardless of the state of the grid. Be among the first. To deploy Rivus battery systems in your industry starting in 2025. Sign up now for a consultation with one of our team members

Rivus Batteries" Board of Directors 2024 October: o Dr. Cedrik Wiberg - Founder & CEO of Rivus Batteries, PhD Chemistry - Since 2019 o Lars Ulin - CEO & Owner of NAVCAP, MBA - Since 2023 o Dr. Alexander Schwartz - Partner at xista science ventures, PhD Organic Chemistry - Since 2023 ...

Rivus Batteries is pioneering sustainable energy storage with its innovative, metal-free flow battery technology utilizing water-based organic electrolytes. The company focuses on reducing costs and environmental impact, offering a greener ...

Rivus Batteries - Grid scale energy storage by organic flow batteries. Need Rivus addresses the urgent need for cost-effective energy storage, targeting the growing >EUR50B market for stationary battery storage by providing green and ultra-low cost organic flow batteries.

Svenska startup-företaget Rivus Batteries tar in sex miljoner kronor från xista science ventures, NAVCAP AB och EIT InnoEnergy för att påskynda utvecklingen av metallfria batterier. Företagets mål är att halvera kostnaden och klimatavtrycket för storskalig energilagring genom att ersätta tungmetallbaserade elektrolyter med organiska alternativ i nya flödesbatterier.

The advantages of Rivus" solution are manifold: Rivus" batteries are non-flammable and non-corrosive, thereby they are very safe. The raw material will never run out, and the solution becomes cheaper and greener the more the company scales up - in contrast to today"s batteries that rely on scarce metals that need to be mined and imported.
