

What is solar thermal power generation?

Harnessing solar energy for electric power generation is one of the growing technologies which provide a sustainable solution to the severe environmental issues such as climate change, global warming, and pollution. This chapter deals with the solar thermal power generation based on the line and point focussing solar concentrators.

What is solar thermal plant?

Solar thermal plant is one of the most interesting applications of solar energy for power generation. The plant is composed mainly of a solar collector field and a power conversion system to convert thermal energy into electricity.

What are the different types of solar thermal technology?

Solar thermal technology can be divided into two groups: concentrated solar power generation and solar heat applications. For solar heat applications and concentrated power generation, solar heat is classified as low-temperature heat, medium-temperature heat, or high-temperature heat.

What is solar thermal energy used for?

Solar thermal energy can be used for domestic water heating drying processes, combined heat and electricity generation in photovoltaic thermal collectors, direct and indirect electric power generation, desalination, cooling purposes, and other applications such as industrial and building indoor environments.

What is a concentrated solar thermal (CST) power plant?

Concentrated solar thermal (CST) power plants, also known as the CSP systems, obtain the heat energy from solar radiations, for the subsequent conversion of heat into electrical energy. Large numbers of technologies have been developed so far for the concentration and collection of solar radiations.

How does solar thermal power work?

Solar thermal power generation uses the sun as a source of heat. As discussed above, the energy reaching the earth's surface is mostly either infrared or visible radiation. A solar thermal plant can utilise the infrared and a small part of the visible spectrum. This energy is absorbed and used to raise the temperature of a heat transfer fluid.
