In this work, copper nickel tin sulfide ($\text{Cu}_2\text{NiSnS}_4$) as an encouraging alternative absorber for thin-film photovoltaic devices is explored. Here, the $\text{Cu}_2\text{NiSnS}_4$ (CNTS) absorber-based heterojunction solar cell is designed through a two-stage theoretical approach using Solar Cell Capacitance Simulator in one-dimension (SCAPS-1D). Initially four different ...

A solar cell functions similarly to a junction diode, but its construction differs slightly from typical p-n junction diodes. A very thin layer of p-type semiconductor is grown on a relatively thicker n-type semiconductor. We then apply a few finer electrodes on the top of the p-type semiconductor layer. These electrodes do not obstruct light to reach the thin p-type layer.
