How do I connect solar panels to my home?

After installing the inverters, connect the solar panels to your main service panel. This involves wiring the inverters to the breaker box to seamlessly integrate solar-generated electricity with your home's existing power supply. Before connecting solar panels to your house, it's essential to obtain any required permits from local authorities.

Can solar panels generate electricity?

Yes, it can - solar power only requires some level of daylight in order to harness the sun's energy. That said, the rate at which solar panels generate electricity does vary depending on the amount of direct sunlight and the quality, size, number and location of panels in use.

Why should a solar PV system be connected to the grid?

For financial benefit. Connecting your solar PV system to the grid allows you to take advantage of the FIT, which gives you a fixed amount of money for each kWh of electricity you generate. On top of these payments for energy generation, you also receive a sum of money for feeding any surplus energy into the grid.

Can solar panels be connected to the National Grid?

Are solar panels connected?

Solar panels are connected. Solar panels are either wired in series or parallel connections. A series connection is preferable for smaller systems, whereas parallel connections are suited to larger systems and those that face uneven sunlight. In most cases, panels will come pre-connected. System circuit is connected.
