

What is solariskit?

SolarisKit's flagship flat-packable, self-assembled solar collector. Build your own EU certified solar thermal collector today. The complete above ground swimming pool solar heating kit. Use solar energy to heat your pool without breaking the bank.

What is a solariskit solar collector?

The SolarisKit solar collector is the world's first flat-packed, self-assembled solar collector. Our patented flat-packed design makes it easier than ever to ship and install your solar hot water system. Our solar collectors take around 20-30 minutes to assemble with no tools needed.

Can solariskit provide carbon free hot water?

Learn how SolarisKit can provide carbon free hot water for your home or building in 60 seconds. From providing innovative solar solutions to design and manufacturing expertise, SolarisKit is your trusted solar thermal solutions partner.

Does solariskit have a hot water storage tank?

Like any solar hot water system, the SolarisKit solution also has an insulated hot water storage tank. The tank stores the heat collected by our solar collectors so it's ready to be used when you need it. SolarisKit can provide tanks of any size with 180L, 250L, and 300L being our most common.

Can solariskit heat water?

The heat can then be used for a wide range of applications reducing energy costs and carbon emissions. The SolarisKit has been tested to European standards to never heat water above 76 degrees Celsius making it much safer to use, even in sunny/hot climates.

The kit shown above includes enough piping to accommodate more collectors. Using 6 collectors, we were able to heat our hot tub from 19.1°C to 32.5°C in under 8 hours with almost zero running costs.

Our collectors were able to harvest 33.65kW of energy from the sun and heat the water up by 13.4°C (that's 1.75°C per hour): demonstrating a ...

The active flow DC-powered solar thermal hot water system is an excellent solution for off-grid living, particularly for cabins, huts, glamping sites, and tiny homes. These systems use solar energy to heat water, which is then circulated using DC-powered pumps, making them highly efficient and suitable
