High water recovery for inland desalination demands an alternative to reverse osmosis. Evaporative processes are able to reach zero liquid discharge (ZLD) but a cost-effective renewable ZLD process has been elusive.

Today, Sunvapor's low-cost solar thermal collector technology generates industrial process heat that is cost-competitive with natural gas and produces virtually zero carbon emissions. "Second only to the transportation sector, ...

Today, Oberon Fuels, a renewable fuels producer, and Sunvapor, a renewable heat provider, commissioned a solar steam project under the first purchase agreement in the U.S. for industrial solar steam.

Sunvapor has just put into operation the USA's first "solar steam boiler" for pasteurization. The California-based solar process heat and desalination developer has commissioned a 2.3 MW field of parabolic trough collectors for an almond processor in Madera, north of Los Angeles. ...
