How do you install a solar system?

Once the solar panels are installed, the system needs to be activated. This involves interconnecting the solar panels, installing the inverter, and commissioning the system. During this step, installers should note that as long as the solar panels are receiving sunlight, they have an open circuit voltage.

How to plan a PV installation?

Surface Area: The surface area of the site at which the PV installation is intended should be known, to have an estimation of the size and number of panels required to generate the required power output for the load. This also helps to plan the installation of inverter, converts, and battery banks.

How to install solar panels?

The basic system is to start with the installation of a rack or platform. If the panels are roof-mounted,a roof racking system is first installed. A ground platform is needed if the panels are ground-mounted,and installing the solar panels is not difficult. What is more difficult is wiring them.
