

How much power does a Trina Solar 660w+ module generate?

This series generates power of 675W with a conversion efficiency of 21.7%. It is the world's first IEC certification for 660W+ modules issued by a highly authoritative international certifying body. It is also another major breakthrough in terms of the reliability of Trina Solar's Vertex 210 modules.

What voltages can Trina Solar modules operate at?

Trina Solar modules are certified for operating in Application Class A installations at voltages below 1000V DC (For TSM-PE05A.\*\*, PE14A.\*\*, below 1500V DC).

Are Trina Solar 660w+ solar power modules IEC 61215 & 61730 certified?

Trina Solar today announced that its Vertex 660W+ solar power modules have received IEC 61215 and IEC 61730 certification for their performance and safety from TÜV Rheinland. This series generates power of 675W with a conversion efficiency of 21.7%.

Can Trina Solar modules be installed in landscape or portrait orientation?

**SITE SELECTION** Trina Solar Modules can be mounted in landscape or portrait orientation however the impact of dirt shading the solar cells can be minimized by orienting the product in landscape. Solar module is recommended to be installed at an optimized tilt angle to maximize the energy output.

Are Trina Solar modules corrosive?

According to Intertek-conducted IEC 61701:2011, salt mist corrosion testing of photovoltaic (PV), Trina Solar modules can be safely installed in corrosive salt areas within proximity of the ocean or sulfurous areas.

How do you protect a Trina Solar PV module?

Cover the front surface of modules by an opaque material when repairing. Modules when exposed to sunlight generate high voltage and are dangerous. Trina Solar PV modules are equipped with bypass diodes in the junction box. This minimizes module heating and current losses.
