

How will Vietnam's power consumption impact its energy security?

According to Institute of Energy of Vietnam (IEV), Vietnam is set to face a surge in power demand and consumption over the coming decade, which will have an impact on its energy security. The Government of Vietnam expects power consumption to grow 10-12 % annually through 2030, one of the fastest power consumption growth rates in Asia.

How does the Vietnamese government develop the power industry?

The Vietnamese government relies on the national power development plan to advance the sector, which forecast growth in demand and map out the overall development of the power industry to meet demand ten years out.

Will Vietnam have a nuclear power plant in 2030?

The PDP7R called for nuclear power capacity of 4,600 MW to be installed by 2030, representing 5.7% of Vietnam's energy mix. However, plans for the first plant, Ninh Thuan, have been canceled, and the country will focus instead on renewables, coal, and natural gas for power supply.

Is Vietnam a good place to buy electricity?

Electric power represents one of the most promising areas for U.S. commercial prospects in Vietnam, but also the most challenging. Vietnam Electricity (EVN), a state-owned enterprise that reports directly to the Prime Minister, is the largest buyer of electricity, and holds a monopoly on transmission and distribution.

Does Vietnam have a power monopoly?

Vietnam Electricity (EVN) has a near-monopoly in the power generation, supply, transmission, and distribution business.

Is there a legal framework for offshore wind power in Vietnam?

There is no clear legal framework in Vietnam instructing how to carry out on offshore wind power currently. Vietnam's installed solar capacity of rooftop solar and solar farm has doubled in recent years, rising to an estimated 17,600 MW in 2021, owing mainly to a massive build of more than 11,000 MW in 2020.

The project features a \$5-billion LNG-fired power plant with a capacity of 4,800 MW and a \$2-billion terminal system supplying eight million tons of gas yearly.
