

Which type of paint should be used for energy storage containers

What is the best paint for shipping containers?

The best paint for shipping containers is marine-grade waterborne DTM (direct-to-metal) paint. This type of paint is durable, water-resistant, and corrosion-resistant. It also contains low levels of VOCs in comparison to other types of paint, which makes it safer to use. This is the best paint for shipping containers being used as homes.

Can you use acrylic paint on shipping containers?

Another good option for shipping containers is acrylic paint. It comes in bold color options, is durable, and is very effective when it comes to painting shipping container exteriors. However, when it comes to shipping container interiors it's not the greatest idea to use acrylic options.

Can you paint a shipping container?

Of course, on top of the type of shipping container paint you use, you'll have options for surface appearance. We recommend enamel paint because it gives off a professional opaque shine. But just like with priming, always invest in enough paint for two coats for optimal paint adhesion. What about colors?

Is marine grade paint good for shipping containers?

Marine grade paint is always used for shipping containers, this provides good protection from the elements and is very hard-wearing. Our high quality acrylic marine grade paint is hard wearing and has a satin finish. See our full range of shipping container paint colours to suit almost any taste!

What type of paint do I Need?

The type of paint you'll need depends on the container's application. Waterborne paint has resins and pigments that disperse in water. It gives a clean and uniform finish and is environmentally friendly with lower VOC levels. With proper maintenance and quality control, it is better at preventing rust than an oil-based painting system.
