How can energy storage help the electric grid?

Three distinct yet interlinked dimensions can illustrate energy storage's expanding role in the current and future electric grid--renewable energy integration, grid optimization, and electrification and decentralization support.

Why are we legislating electricity storage?

Why are we legislating? Electricity storage covers a range of technologies that store low carbon energy for when it is needed, for example in batteries on the wall of your home or business, or in facilities that pump water to higher reservoirs when electricity is abundant, and let it flow back down through a turbine when it is scarce.

Will energy storage help a decarbonised power system?

Therefore, the government has said a decarbonised power system will need to be supported by technologies that can respond to fluctuations in supply and demand, including energy storage. The government expects demand for grid energy storage to rise to 10 gigawatt hours (GWh) by 2030 and 20 GWh by 2035.

Which technologies should not be considered as electricity storage?

(B) Technologies that should not be considered as electricity storage o Capacitors and supercapacitors when used as circuit impedance components o Transformers o Inductors o Thermal energy storage when the stored energy is used directly as heat and not re-converted to electricity before being used

Should electricity storage be regulated as electricity generation?

Alongside government, we have clarified our view that in the energy system, storage provides services equivalent to generation. Therefore, our view is that electricity storage - for licensing purposes - should be treated as electricity generation. We have previously stated that our approach to regulating storage should be:

Should the UK invest in a strategic reserve of electricity storage?

A strategic reserve of electricity storage is a critical investment to secure the UK's energy supply against future shocks, but the Government is still equivocating over whether it is necessary to invest in one. "Since 2023, the Government has had a Department for Energy Security and Net Zero.
