

The battery, called the aPower, contains 13.6 kWh of lithium iron phosphate battery cells and its own inverter to change the DC power from the batteries to AC power for the home's use. The aGate handles smart energy management, automatically controlling battery charging and discharging and directing the flow of power to circuits in the home.

The results indicate that the Western-developed NP test battery is appropriate for use in Zambia and can serve as a viable HIV and AIDS management tool. See full PDF ... Donald R.
